Governing the Six Sigma Project Portfolio - 1 Day

Course Code: SIG304

The vehicle for achieving improvement in a Six Sigma program, is the improvement project. In a successful program, the culture of improvement, and a desire for improvement, is instilled throughout the organization. A negative side effect of this is the uncontrolled growth of the number of projects and project teams. This class addresses this issue by providing guidelines for managing and controlling this large number of projects, the project portfolio.

Learning Objectives

- Describe the role of the project portfolio
- Define what is the portfolio?
- Discuss the role of the portfolio manager
- Explain the role of master black belt
- Set performance metrics
- Use dashboards
- Handling changes in organizational priorities
